The rims described as "rolled^2" are of the more developed profile, i.e. smaller, while those just called "rolled" are of the heavy early shape.

The eponyms in this list (ΑΡΙΣΤΑΝΑΞ, ΕΠΙΧΑΡΜΟΣ, ΙΣ[ΟΔΟ]ΤΟΣ, ΠΟΛΥΚΛΗΣ, ΤΙΜΟΚΛΗΣ, and ΤΙΜΟΣΤΡΑΤΟΣ are all listed in early Rhodian period C (or (C)), and none in C-plus, the latest of C, just before the naming of the month. So, first quarter of 3rd?

Must be noted that recording from this lot was not necessarily complete, it was not thought of as a group (as the ΑΠΟΘΕΤΗΣ was) but I was just salvaging pairs and important large fragments of early Rhodian. Must try to find out what else was with these, for instance non-Rhodian. It would be good to check also that all the pieces assembled here do belong together, including those of ΑΞΙΟΣ and ΑΡΙΣΤΟΚΛΗΣ with rim of shape which became normal later.

On dates of Rhodian 3rd BC

See notes on SAH from Dipylon-Brunne: They fit in some ways the dates amended on the list of 10.IX.68 but not entirely.

Shd observe that Fr. Braun's dates for the material have been modified, and may be modified further: But anyhow they should be considered for dating of 3rd BC Rhodian (and work very well for early 2nd Knidian).

confirmations

Early Rh. handle profiles

and a few by chance.

How to get in say 60 terms before Group B?

332 B.C. city - harbor given over to Alexander and Macedonian garrison est. (P.-W. Rhodes p. 777)
323 after Alex's death, drove away garrison!

Suppose under the garrison the eponym changes 3 times a year, as sug. for Knidos:

332 - 323 B.C. 30 terms (not priests?)
323 - 293 B.C. 30 " annual change
60

7.IV.63 It seems Grahov has proposed 331(-1) B.C. as start of Rh. st. pin. I think I have it from Zeest, when quite G.'s unpublished ms. cites regularly by Soviet scholars. Check.

31.XII.63
26 terms "priests" (and others are as [illegible])

323 BC / 275 BC / 48 yrs.
332 / 275 / 57 yrs.
For all annual: We have too many names!

332 B.C. / 60+yrs / 272 B.C.
323 B.C. / 60+ / 263 B.C.
For dates of Group B.

Following conversation w. T. Rambitsdeck about the Macrison stone, I try to sort out eponymous which might be of the period of the garrison. Eliminate: 1.) those named as ἱερεῖς (X) ἀρχιερεῖς; 2.) those that appear in bullion type (since it is believed that they are written 25 or 30 years of 275 B.C. (? acc. to old chronology). (See Koroni SAH, Hesp. 1963.) Did not bother to enter ① names (for bullion) in the pre-month list except when name not known with title.

What is left as possible garrison commanders:

5.VII.66 Why exclude:

Ἀπατούριος)

Ἀπολλόδοτος ? dated

Total: 20 (67 names in 332 names)

5.VII.66 Nota B would be better if Phokion were not Rhodian (mercenaries of Ptolemy). But many seem not Rhodian.

Probably to be increased by homonyms of later eponyms. Only

5.VII.66 Now Ἀριστοκράτης probably by name not to be confused with prec.
